

Based on the provided business report, I'll generate the requested details:

1. MVP Features:

The Minimum Viable Product (MVP) will focus on the core features that provide value to customers and help validate the business model.

1. User Registration and Profile Management: Simple user registration, login, and profile management system.
2. Product Catalogue: Basic product catalogue with a limited number of products (approximately 500-1000 SKUs) from local farmers.
3. Search and Filtering: Basic search and filtering functionality to help customers find products.
4. Shopping Cart and Checkout: Simple shopping cart and checkout process with payment gateway integration.
5. Order Management: Basic order management system with order tracking and updates.
6. AI-powered Recommendations: Basic AI-powered recommendations based on customer purchase history and preferences.
7. Convenient Delivery Options: Options for same-day and next-day delivery.
8. Customer Support: Basic customer support through email, phone, or chat.

2. Product Roadmap:

The product roadmap will be divided into three phases:

Phase 1 (0-6 months):

1. MVP Launch: Launch the MVP with basic features.
2. User Feedback and Iteration: Collect user feedback and iterate on the MVP to improve the user experience.
3. Partnership Development: Develop partnerships with local farmers and suppliers to expand the product catalogue.

Phase 2 (6-12 months):

1. Advanced AI-powered Recommendations: Implement advanced AI-powered recommendations based on customer behavior and preferences.
2. Personalized Product Offerings: Introduce personalized product offerings based on customer purchase history and preferences.
3. Expanded Product Catalogue: Expand the product catalogue to include more products (approximately 5000-10000 SKUs).
4. Improved Logistics and Delivery: Improve logistics and delivery capabilities to reduce delivery times and costs.

Phase 3 (12-18 months):

1. Subscription-based Model: Introduce a subscription-based model with discounts and loyalty rewards for frequent purchases.
2. Integration with Other Services: Integrate with other services, such as meal kits, ready-to-cook meals, and personalized nutrition plans.
3. Advanced Analytics and Insights: Develop advanced analytics and insights to help customers make informed purchasing decisions.
4. Expansion into New Markets: Expand into new markets, including Tier 2 and Tier 3 cities.

3. Timeline:

The timeline for the project will be approximately 18 months, divided into three phases:

Phase 1 (0-6 months): MVP development and launch.

Phase 2 (6-12 months): Iteration and expansion of the product catalogue and features.

Phase 3 (12-18 months): Introduction of new features and expansion into new markets.

4. Team Structure:

The team structure will include:

1. CEO/Founder: Overall strategy and direction.
2. CTO: Technical direction and development.
3. Product Manager: Product development and management.
4. Marketing Manager: Marketing and customer acquisition.
5. Operations Manager: Logistics and delivery management.
6. Customer Support Team: Customer support and feedback collection.
7. Development Team: Front-end and back-end development.
8. Design Team: UI/UX design and development.
9. Data Analyst: Data analysis and insights.

The team size will be approximately 15-20 people, with a mix of full-time and part-time employees, as well as freelancer
